From entry to award.

Run photographic competitions with online entries, live scoring and connected offline judging.

Competition sections with running-order controls, scores and award badges. Demonstration entries.

Competition setup

Create print or digital sections, entry windows, rules, judge arrangements and scoring limits. Identify league and independent competitions.

Online entries

Members submit photographs and titles, manage their own entries and view published results.

Shared running order

Choose entry order, random, author, title or score order so the section list and scoring display follow the same sequence.

Live judging

Score print and digital entries with single-judge or three-judge arrangements and a remaining-to-score count.

Projection display

Present photographs on a selected screen with full-screen viewing and controls for titles, authors and scores.

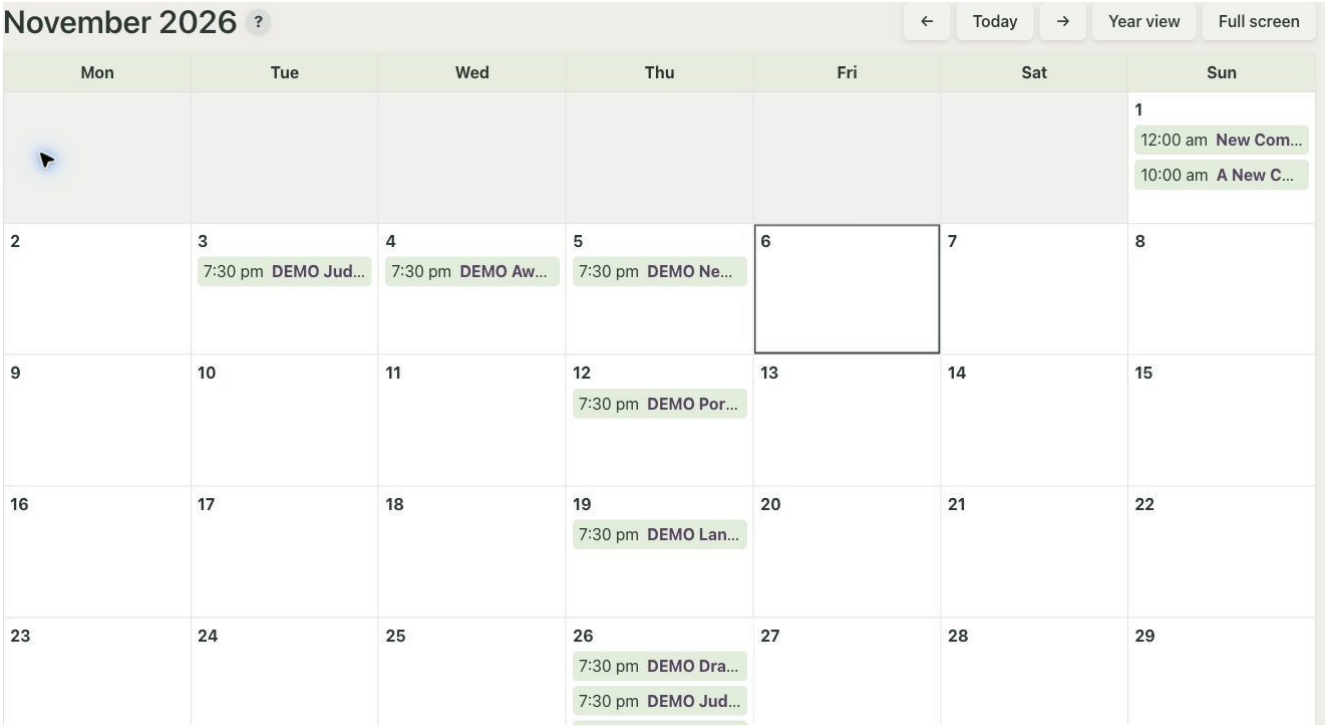

Awards and certificates

Allocate awards, publish results and download individual or competition-wide award certificates.

Print workflow: scan barcodes to select entries and produce Avery L7165 print labels. Connected review: select an image in the section list to show it in an active judging session.

Keep the season organised.

Plan the programme, manage recurring meetings and give members a clear view of what is coming up.

Monthly calendar with direct links to club activities. Demonstration schedule.

Activities and calendar

Organise meetings, lectures, workshops, photo walks and competitions; browse events by month or year.

Recurring schedules

Prepare weekly, fortnightly or monthly drafts using the club meeting pattern. Review and activate activities before they appear in feeds.

Club closed dates

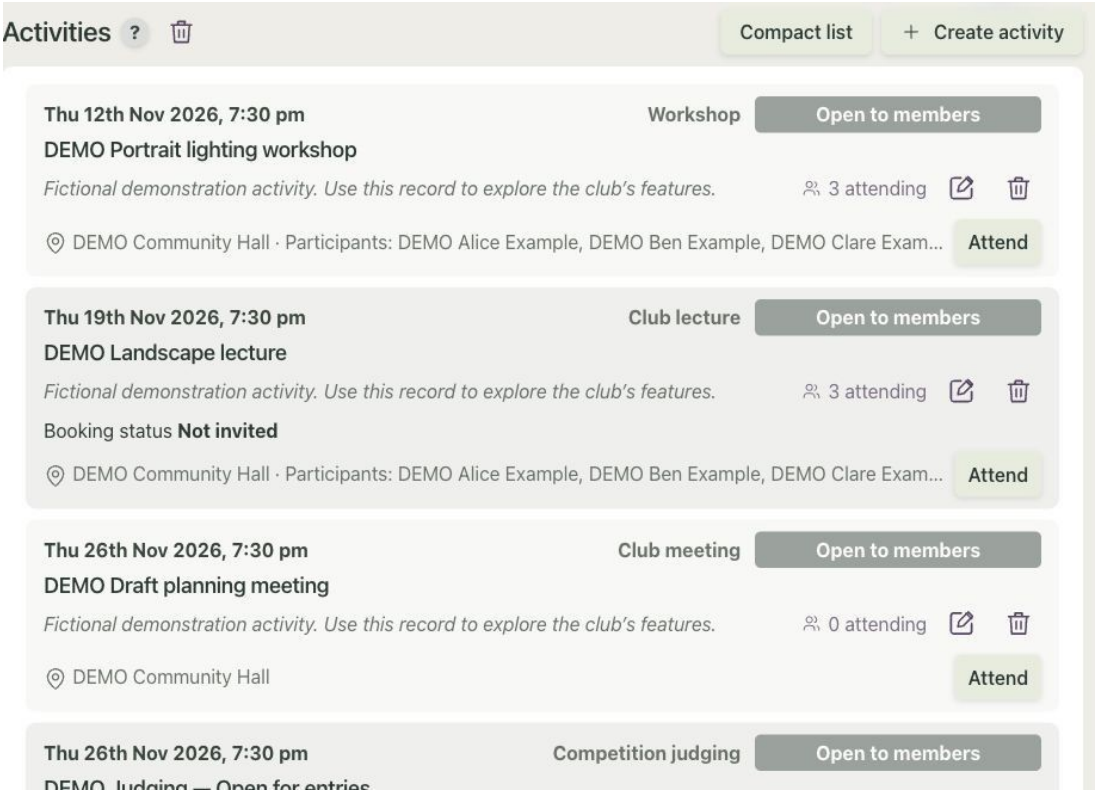

Exclude regular meetings during closed periods while keeping photo walks and summer outings independent.

Programme ordering

Use detailed or compact administrator lists and drag activities into the required programme order.

Make every meeting count.

Give members clear event details and attendance controls, with administration tools close at hand.

Activity list showing demonstration workshops, lectures and meetings.

Event details

Keep dates, times, venues and formatted descriptions together. Use the saved club venue when an activity has no specific location.

Attendance

Members choose which activities to attend. Administrators see participation alongside each event.

Drafts and activation

Prepare activities privately before activating them for the feeds enabled by their activity type.

Illustrative photographs

Add activity photographs, show supporting images and let visitors open larger image previews.

Flexible programme

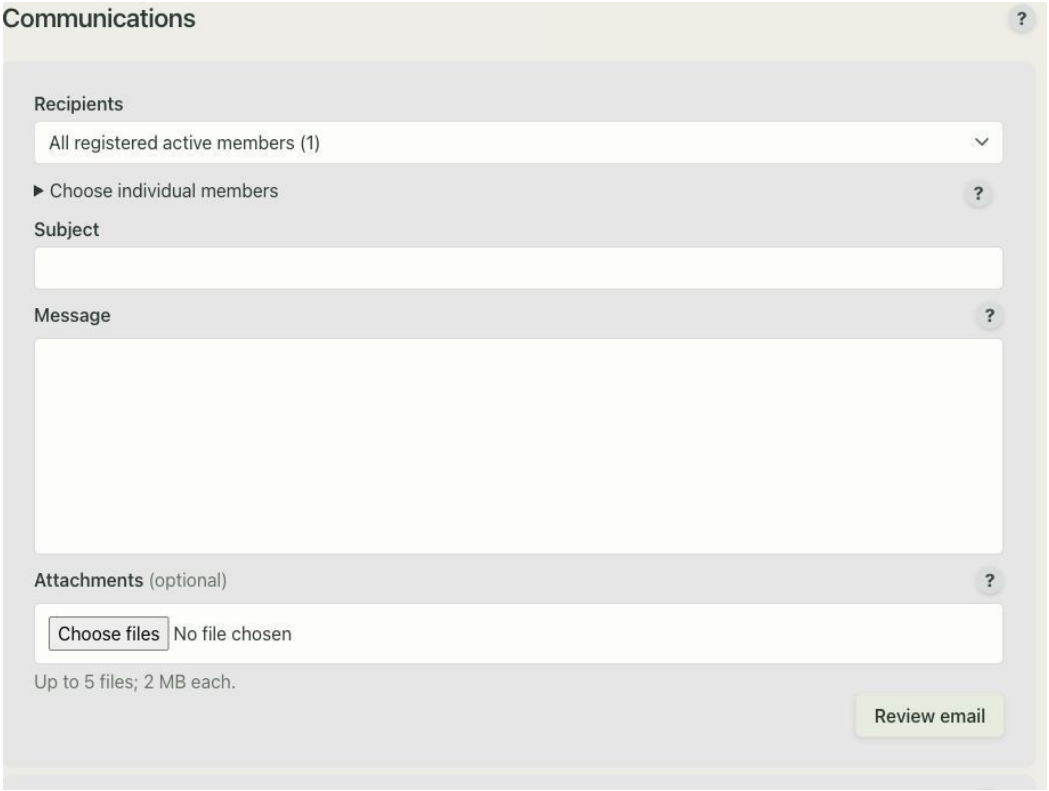

Edit activities, manage cancellations, maintain recurring definitions and review the compact programme.

Contextual guidance

Field help, menu tooltips and the Help panel explain controls while keeping the workspace clear.

Keep members connected.

Manage membership records and send club messages from the same workspace.

Compose a message, choose recipients, add attachments and review before sending.

Membership management

Invite and register members, maintain annual types and fees, record renewals and cash or cheque payments.

Club officers and leagues

Assign officer responsibilities and organise members into the club leagues used for competitions.

Member announcements

Email registered members, club officers or selected individuals with formatted text and attachments.

Message history

Review recipients and sending status. Replies go to the administrator who composed the message.

Club access

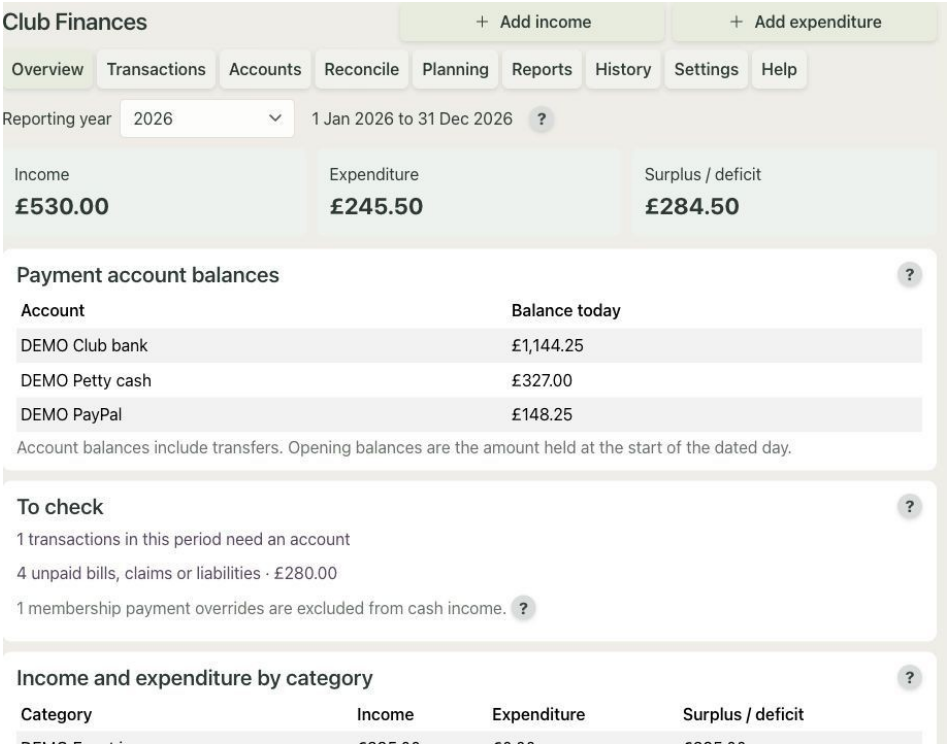

One club per installation, with personal member accounts, administrator permissions and a private database on the club's own server.

Optional reminders

Members opt in per club to enabled renewal, competition deadline and attendance reminders. Entry, result and payment confirmations remain separate.

A clear view of the accounts.

Bring income, expenditure, account balances and financial review into the club workspace.

Finance overview with demonstration balances. Use the Bank accounts tab.

Income and expenditure

Record receipts and spending by shared category, including linked membership income and activity-related costs.

Bank accounts

Track bank, cash, PayPal and credit-card records with opening balances, transfers and refund records.

PayPal membership checkout

Configure incoming payments in Bank accounts, PayPal Account Information. Use Sandbox before Live. Verified Live receipts update membership and finance.

Statements and reconciliation

Import statement CSV files, match bank movements to transactions and reconcile balances.

Planning and evidence

Maintain budgets, unpaid bills, claims, assets and liabilities; attach receipts or invoices.

Reports and approval

Export reports, review categories and balances, approve periods, retain history and give read-only review access.

PayPal credentials autosave privately; dots indicate a saved Secret. PCM records refunds already made but does not send PayPal refunds or automatically process disputes and reversals.

One club. A connected system.

Present your club online and take downloaded competitions into the meeting room for offline scoring.

A club heading using the standard site logo when no club logo has been supplied.

Club identity and public page

Present the logo, description, postal address, contacts, officers, programme and posts with a choice of colour palettes.

Club language - initial rollout

Primary administrators can choose English, French, German or Spanish. Shared navigation is translated; other pages fall back to English.

Download, score, reconnect

Use the private club API code to download competitions, score offline and upload results when connected. Publish results separately in PCM.

Your own website

Use the HTTPS domain or subfolder configured during setup. The public club page is the home page, with a Member login button.

Offline scoring apps

Primary administrators can download companion Mac and Windows scoring apps. Download the competition and images while connected.

Privacy notice

Use the club privacy contact and replace the default factual description with the club-approved notice in Installation settings.

Follow the whole season.

Connect league results, annual membership and carefully controlled notifications.

League or independent

Classify competitions explicitly. Include league competitions in a named season with actual start and finish dates.

All scores or Best N

Count every scored image or each member's highest N individual image scores. Apply the rule independently to Print, Digital and Combined standings.

Separate league rankings

Keep a member's season league allocation even if their normal club league changes later. Equal totals share a position.

Mixed scoring scales

Use percentage scoring to combine competitions with different maximum marks; direct judge totals require compatible scales.

Published standings

Publish a reviewed snapshot. Members see their own standing by default; sharing full league tables requires an explicit choice.

PayPal verification

Verify completed incoming payments server-side. Sandbox tests create no real membership receipts or finance income.

Optional reminders

Club settings and member opt-in both start off. The hourly worker handles eligible reminders and separate queued service messages.

Administrator control

Review unfinished payments, rejected edits and delivery statuses. Publication, sending, payment verification and transfers remain explicit actions.

Self-hosted setup

A browser wizard checks the server, database and private storage, creates the first administrator and locks setup. Desktop app downloads are included.

Solo feature overview: 7 November 2026. Screenshots use demonstration records and may retain earlier labels. External PayPal Sandbox approval and return still require verification with the club's own test app and buyer account before Live use.
